

**False facts**

1. Richard III was a hunchback:

Richard III's spine was curved, but testing showed the cause was a bad case of scoliosis. Kyphosis is the medical term for having a hunchback.

2. Napoleon was short:

History books, for years, listed Napoleon's height as five feet, two inches. Mistakenly they believed that a French 'foot' was the same as an English foot; properly converted Napoleon's height was five feet, seven inches.

3. Thomas Crapper invented the Flush Toilet :

His brand of 'water closets' gained popularity in England but Crapper did not invent the flush toilet. Finer households were already installed with flush toilets by the time Thomas started his plumber apprenticeship in the 1840s.

The first ever Central Junior B Hockey League champions (1954-55) were Woodstock Warriors. Two players from the team went on to play for the Chicago Blackhawks of the NHL ... Bobby Hull was one, and Matt Ravlitch was the other.

Did you know that Woodstock is the only city in Ontario that still has its 10 original downtown buildings? Can any A.P.S.A.L.M. readers list all 10?

Bowlerama was the former name of C & D Lanes located at the corner of Mill and Main.

Believe you can and you're halfway there  
~ Theodore Roosevelt

Change your thoughts  
and you change your  
world  
~ Norman Vincent Peale

We can't help everyone, but everyone can help someone  
~ Ronald Reagan

We know what we are, but know not what we may be ~ William Shakespeare

The aim is to make words using the letters in the square.

Every word must contain the centre letter.

All words must consist of four letters or longer.

Try to find the nine letter word.

**Time limit of 10 minutes.**  
**Issue 6 answer = EDUCATION**

L	S	N
I	A	O

A snail's lifespan is dependant on what exact species they are and what habitat they live in.

Some only live for five years but can if lucky enough can live to as long as 25.

While it may not look like it snails slide around on a single foot.

The one long muscle acts just like a human extremity and helps them grip and push themselves along the ground.

The slime - which is in fact mucus - helps lubricate the floor and helps them pass along with less friction.

They usually move at a steady pace but can reach a dizzying 50 yards per hour - 1.3cm per second.

You can eat the slime, yes you read that correctly - you can eat the slimy trail left behind.

You might not think so to look at them but snails actually do have teeth.

In fact the average garden snail has over 14,000 of them.

Which 'Bond' film featured this vehicle?
